

Cleaniq Service Pro — App Review Guide

A staff app for Cleaniq's cleaning professionals · iOS

What this app is

Cleaniq Service Pro is a private, staff-only app for cleaning professionals who are contracted to work with Cleaniq, a home and office cleaning service. It is **not** a public consumer app — there is no self-registration. Worker accounts are created by Cleaniq administrators, who then issue login credentials to each worker.

Test account for review

Email	[insert test worker email]
Password	[insert test worker password]

If this account has not logged in before, you will be asked to complete a short one-time profile (address + bank details) before the main app unlocks. This is intentional — see "Profile completion gate" below.

Screen-by-screen overview

- **Onboarding (first launch only):** five full-screen photo slides introducing the app, ending in a "Get Started" button leading to Login.
- **Login:** email + password sign-in. No "sign up" option by design — accounts are admin-issued.
- **Complete Your Profile (first login only):** a mandatory short form collecting address, postcode, and bank payout details. Once submitted, the worker proceeds to the main app and will not see this screen again.
- **Home:** shows a personalised greeting, current wallet balance, and four tabs — *Active jobs*, *job History*, *incoming job Offers*, and *Payments*.
- **Job Offers:** available jobs the worker can accept, filtered to their assigned region. Each offer shows pay rate, duration, schedule, and total payout before acceptance. Tapping an offer opens full details with *Accept / Suggest* a different time / *Turn down* actions.
- **Schedule:** calendar view of upcoming and active jobs.
- **Messages:** in-app chat between the worker and the customer for an accepted job (no phone numbers exchanged).
- **Notifications:** alerts for new job offers, accepted jobs, and messages.
- **My Account:** profile details, bank details, wallet/withdrawal history, and logout.

Notes that may help avoid review delays

- **Job availability varies:** the test account may show few or no live job offers at the time of review, depending on real demand in that worker's region (UK or Nigeria). An empty Offers tab is expected behaviour, not a bug.
- **Push notifications:** the app requests notification permission on first launch, used only to alert the worker about new job offers and customer messages. Declining this permission does not block app use.
- **Location:** the app does *not* request device GPS location. Job matching is based on a region field set by the admin on the worker's account, not real-time location.

- **Payments:** the in-app wallet displays worker earnings and payout history; it does not process any payment input from the reviewer (no card entry, no IAP) — payouts are issued by Cleaniq directly to the worker's bank account on a weekly schedule.

Support contact

For any issue accessing the test account during review, please contact: **[insert support email]**
